RAGHAVENDRA SAGAR

raghusagar3497@gmail.com | Linkedin | +91 7760365810 | Bengaluru, India

PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer with 6+ years of software development experience in planning, designing, development, testing, and deployment of enterprise software applications using Java and Spring Boot. Hands-on expertise building scalable, distributed cloud-native applications on Microsoft Azure and GCP.

Core Strengths: Scalable System Design | Microservices Architecture | Cloud Infrastructure (Azure, GCP) | RESTful API Development | CI/CD Pipelines | High-Throughput Event Streaming | Production Grade Reliability | Observability & Monitoring | Agile Delivery.

EDUCATION

Year	Degree / Exam	Institute	GPA/Marks
2015-2019	B.E in Information Science and Engineering	R.V. College of Engineering, Bengaluru	7.38/10
2013-2015	Intermediate (PUC)	Sri Kumarans PU College	87%
2013	10th Board	Seventh Day Adventist School	85%

SKILLS

Languages: Java 8+, Python, Shell Scripting, SQL, C, HTML/CSS

Backend & Cloud Technologies: Data Structures and Algorithms, Microservices Architecture, RESTful APIs, Spring Boot, Hibernate, Kafka, Debezium, Apigee, Messaging Systems, Multi-threading, Concurrency, Distributed Systems, Low-Level Design (LLD), High-Level Design (HLD), SOLID Principles, OOP

Cloud Platforms: Microsoft Azure (AKS, Azure SQL DB, Azure Cosmos DB), Google Cloud Platform (GCP), Kubernetes, Docker, Kustomize, HPA

Observability & Monitoring: Grafana, Splunk, Kibana, OpenObserve, Metric Telemetry, Dashboards, Health Checks, Production Alerting

CI/CD & DevOps Tools: GitHub, GitHub Actions, Git, Maven, Jira, Agile, Scrum, SDLC, Automation Scripting, Release Management

Databases, Testing & QA: Azure Cosmos DB (NoSQL), Azure SQL DB, RDBMS, JUnit, Playwright, Unit Testing, Integration Testing, API Testing, Postman

WORK EXPERIENCE

Software Engineer | Maersk *(April, 2026 – Present)*

Tech Stack: *Java, Spring Boot, Kubernetes (AKS), Kustomize, HPA, Playwright, Debezium, Apigee, REST APIs, CI/CD*

- Modernized Kubernetes deployments using modular Kustomize architecture, implemented Horizontal Pod Autoscaling (HPA), and optimized resource allocations, reclaiming 64.5 CPU cores and 54.5 GiB memory across AKS clusters.
- Developed Debezium Source and Sink Connectors for Apigee-based application migration from SOAP to REST services, enabling reliable real-time event-driven data streaming.
- Built a platform-agnostic Playwright E2E test automation framework for automated UI and integration validation across multiple testing environments.

Software Developer - 3 | Walmart Contract (Company - CAOne) *(Dec, 2023 – April, 2026)*

Tech Stack: *Java 8+, Spring Boot, Microservices, Azure Cosmos DB, Kafka, Splunk, Grafana, Kibana, REST APIs, Azure SQL*

- Designed, developed, and implemented an asynchronous Bulk Label Generation platform for FedEx and UPS, improving throughput 5x (from 1 to 1,000 labels per request) through in-depth message queue tuning and concurrency management.
- Led integration of SFExpress Logistics Carrier into Lobo application, enabling Chinese carrier support and driving "Ship with Walmart International" adoption by 15% by FY26 Q2.
- Developed and integrated Package Item Identifier functionality for FedEx, USPS, UPS, and Yanwen logistics carriers, ensuring accurate package tracking and seamless downstream data flow.
- Implemented and debugged Signature on Delivery feature for freight carriers (EFW, AIT, Pilot), guaranteeing compliance with delivery confirmation standards.

- Built, tested, and deployed Create Pickup API for TForce Carrier as part of the WFS LTL initiative, optimizing pickup scheduling and operational efficiency.
- Configured and troubleshot carrier accounts and optimized shipping lane routing, resolving integration bottlenecks across multiple global logistics partners.
- Upgraded and validated core libraries across microservices, debugging dependency conflicts, version mismatches, and deployment pipeline failures for peak-season readiness.
- Diagnosed and resolved production issues through log analysis, root cause identification, and telemetry monitoring using Splunk, Grafana, and Kibana; participated in P0 on-call rotation maintaining 99.99% uptime.
- Mentored and onboarded new team members, providing guidance on carrier API integration patterns, debugging best practices, and observability tools.

Software Developer - 2 | NCR Corporation, Digital Banking *(July, 2019 – April, 2023)*

Tech Stack: *Java, Spring Boot, Microservices, GCP, GitHub Actions, CI/CD, REST APIs, Git, RDBMS, Site Cloning*

- Developed robust APIs facilitating seamless integration of new features into SAAS banking platform, continuously deployed onto live Financial Institution environments.
- Designed and implemented an end-to-end Git-backed feature tracking modifications to website Posts and Pages; empowered SAAS users to approve or reject changes while handling concurrent conflicts.
- Architected a dedicated microservice for real-time monitoring and status tracking during site cloning from source to destination, providing users end-to-end operational visibility.
- Devised and implemented specialized microservices to manage database and file system migrations during site launch (go-live) and site cloning, preserving transactional integrity.
- Engineered a Clone API enabling seamless migration of product modifications across disparate operational regions and environment configurations.
- Built APIs enabling Financial Institutions to deploy, activate, and revert/roll back product changes reliably in production environments.
- Led product migration from on-prem infrastructure to Google Cloud Platform (GCP), developing streamlined CI/CD pipelines in GitHub to enhance deployment speed and reliability.

Software Developer Intern | Honeywell, Chemicals & Manufacturing *(Jan, 2019 – Jun, 2019)*

Tech Stack: *Python, Image Processing, Test Automation, Automation Scripting*

- Developed an automation script automating the display verification and validation testing of Energy Meters, extracting 7-segment characters from LCD images via image processing techniques.
- Built an automated scripting utility for dynamic folder structure creation, accelerating dev setup workflows.
